

# Premium Teflon Pipe Thread Tape

\$2.50

## Product Images

## Short Description

---

Teflon tape is a very thin white tape used to wrap the threaded ends of our poly fittings to improve the watertightness of the joint. Very high quality material that works perfectly to seal your important water coolign connections!

## Description

---

Teflon tape is a very thin white tape used to wrap the threaded ends of our poly fittings to improve the watertightness of the joint. Very high quality material that works perfectly to seal your important water coolign connections!

## Specifications

---

- Premium Teflon material for watertight connection
- 3/4" X 520" on roll

Application:

- Start wrapping the male threads at end of the fitting but do not lap over the end. Doing so may result in reduced water pressure or even clogs from bits of the tape that get into the water supply!
- Start with a couple loops around at the end, then wrap all the threads, overlapping half the width of the tape on each wind.
- Wrap in the direction of the threads starting from the end and proceeding toward the length of the fitting. Wrapping the wrong way may result in the tape coming unwound as the fittings are tightened.
- As you wrap, keep tension on the tape so that it is pulled into the threads.
- If you loosen or disconnect a fitting, remove the old tape and rewrap with a fresh piece.
