Short Description

Product Details:

Hard drive cooling is an essential part of PC performance. Hard drive is where we store our important data and programs in our PC and it reads and writes constantly, which will generate tons of heats. With most of the hard drives running at 10,000RPM nowadays, it is critical to add direct cooling to hard drive. The cooler will serve for the purpose as a direct cooling to your Hard Drive to make sure it stays cold. This cooler is made out of fine aluminum alloy for excellent heat dissipation, and includes two silent and high performance 60mm fans to encourage the process. This hard drive cooler is compatible with all 3.5" hard drives, including IDE, SATA, SCSI, and SAS drives. This cooler lowers hard disk operating temperature to achieve maximum performance, reliability, and bearing life

Specifications:

- Aluminum alloy heat sink dissipates heat most effectively
- Built-in two silent and high performance 60mm fans
- Easy installation
- Will fit all standard 3.5" drives: IDE, SATA, SCSI, SAS
- Lowers hard disk operating temperatures

- Maximum performance
- Maximum reliability
- Maximum bearing life
