Short Description

Product Details:

Wii is the new generation game console released by Nintendo at the end of 2006. Amongst the next generation consoles, although Wii does not boast amazing graphics resolution like PS3 and has fewer games than Xbox 360, the unique and innovative wireless "Wii mote" has overwhelmingly swept across the globe. Adults and children as well as people who have never played video games all seem to surrender under its charm and fun. Playing video games becomes a "national sport" all of a sudden; Wii repositioned Nintendo back to the No. 1 brand among leading household game consoles. As Wii is still at the peak of worldwide success, Evercool developed the Fii Cooler specifically for Wii and its dedicated players. Compared to desktop computers, Wii's power consumption (45 Watts) and heat generated is not considerably high. Nonetheless, with a Fii installed, Wii is protected against parts overheating and damage through extensive use, the life of the console is therefore extended. The easy installation and low power consumption makes the Fii a breeze to use. Fii's stylish white color matches and incorporates Wii's design; a side hook for decoration is also devised to create a personal touch and an individualized Fii. If you love Wii...you have got to have a Fii!
