Product Images

Short Description

This new USB hub from Bytecc features a 2-port USB hub and a 52in1 Card reader in what looks like a race car gauge. Actually this is quite an interesting design and has multiple convenient uses. This cool hub work with or without external power and works with most common OS's. If this device isn't ripe to be used in a case mod we don't know what is!

Description

This new USB hub from Bytecc features a 2-port USB hub and a 52in1 Card reader in what looks like a race car gauge. Actually this is quite an interesting design and has multiple convenient uses. This cool hub work with or without external power and works with most common OS's. If this device isn't ripe to be used in a case mod we don't know what is!
