PPCS 8 port Fan Sensor Board

$24.95

Product Images

Short Description

This handy monitoring board allows PC systems to monitor temperature at two separate locations, it deriving power via one Molex connector, support up to 8 fans.

Description

This handy monitoring board allows PC systems to monitor temperature at two separate locations, it deriving power via one Molex connector, support up to 8 fans. A summarized output via a 2-pin fan output line allows your motherboard or add-on card to monitor for any fan failures using just one fan monitoring port. An LED connector lets you visually monitor for temperature or fan failures. The two temperature sensors may be placed at critical points in the system. Selectable jumpers allow the thermal alarm level to be set at 50, 60, or 70 XC. An alarm reset switch lets you silence alarms until repairs can be made. Simple to use and very compact in size, this is a great accessory board for any system where temperature is critical.

Additional Information

Brand	PPCS
SKU	PP-ISF08
Weight	0.3000
Fan Accessory Type	Splitter PCB
Shape	Square
