Short Description

Product Details:

Just like the NOVA - KILLER, Winner-II also has its brand new upgrade in 2008: WINNER-3. New shape, new colors and still really useful, we put a lot of technology in that medium-sized mouse pad. Perfect choice if you don't have space enough on your desk for the KILLER-2.

Featuring NOVA's new colors and new logo, Winner-3 offers various new innovations developed especially for the gamers.

New shape: With an awesome design, definitely more attractive, WINNER-3 features a new shape, more aggressive. Also, that shape will make it easier to stick the mouse pad on your desk thanks to the straight bottom edge.

New colors: Matching the new NOVA identity, the new colors are really attractive. Black, red and white are the 3 main tendencies from now. The WINNER-3 will be available in three different color scales.

One of the main reason of NOVA KILLER success was the unique material developed by NOVA for this mouse pad. A bi-material structure with micro-mirrors spread out in the inner material. We decided to keep that major evolution on WINNER-3.

Specifications:

- Bi-material: That new pad keeps the NOVA unique material. The best ever made for the mouse gliding and the signal accuracy.
- The inner material is now available in two colors, Black or White.
- The outer material (centering frame) is now available in three colors, Red, Black or Silver, determined upon the product chosen.
- 8000 DPI, 0 Latency: This is one of NOVA's main commitments. 0 mouse delay, 0 loss of signal. Our 8000 DPI materials guarantee a perfect response of the mouse signal, Laser or Optical.
- Centering Frame - built of smoother by touch material bordered by a fillet, helps the intuitive mouse re-centering still keeping concentration on the game.
- Underside - non-skid base perfectly adheres to any desk surface thanks to micro-cellular foam layer.
- Size 268X233mm
- Thickness: 3mm
