Used by several electronics cabinet manufacturers and professional AV installation companies, the IXA-CCS gives everybody a quick and easy option of installing fans to your cabinets with a simple kit.

Description

The first and best complete solution for cooling down cabinets with 120x38mm fans, the IXA-CCS is ideal for those looking to do just that with a professional finish. Used by several electronics cabinet manufacturers and professional AV installation companies, the IXA-CCS gives everybody a quick and easy option of installing fans to your cabinets with a simple kit. The base system includes two high airflow 120x38mm fans, their respective housing frames and a five channel fan controller. Comes with 6 feet power cables on the fans and a 5 foot power cord on the fan controller and plugs right into your 120v or 240v AC power outlet. Fans come with a simple, clean DC barrel connector to make plugging in a snap, no need for messy molex connectors. Can add up to three more fans with the optional IXA-AFK additional fan kits designed specifically for use with this system.

Requires a cabinet with a thickness of <0.75 " (19mm) and also >2.5 " (>64 mm) of clearance behind the cabinet for the fan and fan frame to be installed. The only other tools required is a saw to punch out a 5.0" (127mm) diameter opening or 5.0"x5.0" (127x127mm) square opening to mount the fan frame, and a #2 Phillips screwdriver. With the hole punched out of your cabinet, takes an average of 5-10 minutes to install the entire system and get it powered up and working.
