Short Description

This Multi Port Front Drive Bay Panel allows you to access USB, eSATA, FireWire and audio input ports from the front of a PC computer case.

Description

This Multi Port Front Drive Bay Panel allows you to access USB, eSATA, FireWire and audio input ports from the front of a PC computer case.

The panel can be installed into any 3.5in front panel drive bay to provide 4 USB 2.0 ports, an IEEE1394a FireWire port, Speaker and MIC ports, and an external SATA (eSATA) port for convenient quick connectivity to external storage devices.

The 3.5in Black Multi Port Front Drive Bay Panel also includes an IEEE1394a FireWire cable that allows you to extend a rear panel FireWire connection to the bay panel, for motherboards that don't offer an on-board FireWire connection.

Features

- Allows you to easily connect your Audio (Speaker and MIC), Firewire (IEEE94a), USB or eSATA cables to the front of your case
- Fits into a 3.5" bay (or optionally into a 5.25" bay using Accessory bracket BRACKETFDBK)
- HD audio is supported

Applications:

- Eliminates the need to move your PC to gain rear access to ports, by moving them to the front
- Great for quickly connecting printer, external storage, digital cameras, DV camcorders, PDA's, headphones and other portable devices without reaching behind your PC.
