

CoolIT Systems LGA-1156 Retention Kit

\$12.99

Product Images

Short Description

CoolIT Systems new advanced LGA-1156 retention mechanism has great features that maximize the performance of our CPU cooling solutions on i5 CPUs. The innovative design combines components together into a single assembly allowing it to be easily installed and ensures even pressure is placed on the CPU without violating the maximum pressure specified by CPU manufacturers.

Description

CoolIT Systems new advanced LGA-1156 retention mechanism has great features that maximize the performance of our CPU cooling solutions on i5 CPUs. The innovative design combines components together into a single assembly allowing it to be easily installed and ensures even pressure is placed on the CPU without violating the maximum pressure specified by CPU manufacturers. Attention has been given to the smallest details such as the tool run-off protection that prevents accidental screwdriver slippage from creating havoc on expensive motherboard components. This retention mechanism kit includes a LGA-1156 backplate and top plate with spring loaded screws fixed to the top plate. This kit can be used with Domino ALC, Freezone Elite, Boreas and Pure equipped with low-profile skive CPU block.

Additional Information

SKU	AC-RET-1156
Weight	0.8000
Color	Black
Block Accessory Type	Mount Kit
CPU Series	Intel 115X/1200
Block CPU Type	Intel
