Internet Reviews	<p>Aerocool is wants prove to the masses that they are more than just company out to satisfy gamers, professionals and others out there looking for a classy case: a case with fine curves and clean lines. The refinement in appearance is not all that applies here with the BX-500. Function is another key reason the BX-500 will become a well-respected case. For one, it houses two conjunction boxes that makes it easy to connect all the fans inside the case. This is a much needed feature as the case can house up to ten 120mm or larger fans. Overall, the BX-500 is a nice looking case and well built. It offers some features that are simple but very useful. And features we would love to see in all cases.
