## Short Description

The HD5800 series heatsinks are designed to cool surface mount components (memory, and mosfets) on ATI Radeon™ HD 5800 Series reference design graphics cards. They are designed to be installed in conjunction with our MCW60 VGA water-block and allow stable overlocks of these high-end graphic cards while keeping them cool and silent.

Available versions:

HD5850-HS, for Radeon™ HD5850 reference design boards

HD5870-HS, for Radeon™ HD5870 reference design boards

The performance advantage of using the MCW60 GPU cooler in combination with a heatsink compared to a full-coverage water-block solutions is well known among enthusiast users: improved thermal conductivity thanks to Swiftech's Diamond Pin Matrix,

and less heat dumped into the liquid cooling loop coming from memory, and power mosfets since they remain air cooled. In addition, this combination provides a complete solution that is more economical than the average full-coverage water-block while offering superior cooling performance at the GPU level.
