Short Description

When it comes to computer enthusiasts, some are entirely dedicated on minimizing the noise produced inside of their computer case while a fair share of other users could truly care less about the noise level as long as they are maximizing their frame-rate and processing power. In fact, there are dozens of products on the market for reducing the noise level created by your computer components whether it is a noisy fan or a hard drive that has seen better days. The engineers over at SilverStone Technology have introduced a new product for reducing the PSU noise level and that is their PP02 Power Supply Acoustic Cover. This product is a plastic frame that is lined with foam padding to absorb the sound and it attaches on the outside of the chassis.
