Description

Phobya's slightly different filling aid!

Classic Black can hold the funnel can be used in multiple places to help to fill in its water cooling. Of course, the main area of the reservoir or in the extended arm a Fillport that is sharing in general, with its small 1 / 4 inch threaded opening only a tiny hole to fill. Another possibility, which would be conceivable to use Y or T-connectors to the circuit to be filled.

The advantages over a household funnel are simple, but still prevalent: the funnel can not slip, the bottom rod is very short through the threads and the hopper side with the soft rubber to practically utilize to narrow points of this tool at all.

The bottom line is you can say with good conscience: This funnel is in any well-stocked watercooling toolbox!
