Description

Who has a strong, powerful while looking but quiet case fan, which is related with the models of the Silent Eagle exceptional and sophisticated solution: Unlike conventional fans allows the surface structure of the Silent Eagle allows an improved airflow - at the same speed. This principle is based on the special surface structure of the blades, which resembles that of a golf ball, which provides less wind resistance. This air turbulence is reduced, which has a particularly quiet operation while maximizing airflow volume. In addition, the frame of the Silent Eagle, the rounded edges of an improved air intake.
