Short Description

A new sealed inner tube inside of the classical outer reservoir tube offers spectacular new possibilities. Install a cold light cathode with a length of 30cm or 10cm, or even use the inner tube with its G1/4" threads to let a different coolant flow through for a totally new and unique effect!

Description

Alphacool' s newest reservoir: Developed to amaze!

Lighting effects in the reservoir for a special look in the system have become a must in the water cooling sector. But the possibilities were rather limited...

The Fuzion Core sets new standards:

A new sealed inner tube inside of the classical outer reservoir tube offers spectacular new possibilities. Install a cold light cathode with a length of 30cm or 10cm, or even use the inner tube with its G1/4" threads to let a different coolant flow through for a totally new and unique effect!

But this is not all: The bottom of the reservoir is equipped with additional small tubes which can be lit with 5mm LEDS from the bottom. This gives an additional new effect to this reservoir which has not been possible before.

Of course additional opening are reserved for lighting modules. Four additional G1/4" threads, two of which are used for connection of the reservoir, are implemented. Hence this reservoir even allows installation of G1/4" lighting modules for even more effects!

The technical aspects of these reservoirs are inspired by the proven designs from previous series. Basic elements of the Alphacool Cape Corp series, which have proven themselves for many years, have been implemented for maximum reliability and safety.

High-quality materials are used, mounting is possible both in horizontal and vertical positions.

The reservoirs are also designed for use with a Fillport for comfortable filling of the cooling loop. Of course all included screw plugs are copper coated following the Alphacool design.

Colour combinations with coolant and lighting, effect combination with many new possibilities and years of experience in reservoir development make this product unique and truly exceptional in safety and elegance. This is the reservoir of the future!

Specifications

Technical specifications:

Material: Acetal, Plexi

Height: 14cm

Diameter: 60mm

Connection threads: G1/4"

Weight: 400g

Extent of delivery:

1x Alphacool Cape Fuzion Core 10 Acetal Black

1x Retaining Brackets POM Black

Locking Screws

Retail packaging

Please note: For mounting additional screws are required.

Additional Information

Brand	Alphacool
SKU	AC-15143-D
Weight	2.5000
Color	Clear
Reservoir Type	Tube Res
Special Price	\$35.95
