Description

Easy control of your devices from the front of your PC. 6 ON/OFF switch controls mounted in a beautiful aluminum 5.25" bay mount.

Phobya's first fan controller without much bric-a-brac, is designed for one main purpose: Full control of the fan speed in your system!

Depending on what your system is doing and what the time of day and year is, the computer need more fan power which results in higher noise emissions, or it can run with slower-spinning fans when a more quiet environment is needed and the summer heat has worn off. This is just what fan controllers like this one are made for and this is what Phobya has designed this unit for. With an unbeatable price compared to similar units Phobya leaves everyone in the dust with the MaxGuide 6 Controller!

The front in classic black Aluminium with the turning knobs, also black, fits into any case with its timeless design. Built for installation in a 5.25" drive bay this controller fits perfectly into any tower design. A small Phobya logo in the lower right corner shows from which quality manufacturer this controller unit comes. Small red LEDs below the potentiometers show to which channels fans are connected. A L for low and H for high show in which way the knob has to be turned to achieve the desired effect. The adjustment in an speed is achieved via voltage adjustments and with a voltage range of 5-12V the speed range of virtually all fans is covered. The unit draws power via a 4-Pin connector from the system PSU.

If you wish for an affordale, well-designed and reliable way to adjust fan speed this is the perfect choice for you!
