Description

Product Details:

With amazing sound quality and superior comfort for long playtime, its the analog headset for gamers who are serious about audio.

Amazing sound for intensive, immersive gaming

Its all about the audio. Thats why the HS1A uses massive 50mm drivers for a level of sonic detail thats just not possible with the 40mm drivers found in most gaming headsets. The result is detailed audio reproduction with clean, accurate bass and sparkling clarity in the mids and highs, even when everythings coming at you at once. Superior audio isnt just more enjoyable it lets you listen longer, without fatigue.

The circumaural, closed-back earcups offer superior noise isolation at LAN events and other high-distraction environments. They keep outside sound out, and your head in the game.

Built for Comfort

You cant play for hours with a headset that binds or pinches. The HS1A uses replaceable memory foam earcups for a custom, reliable fit. The extra-large diameter and deep-dish design help prevent them from touching your ears. Customize your comfort by swapping the two sets of included earpads – microfiber, or synthetic leather.

Great for music, and movies too

A lot of gaming headsets have frequencies response tuned for gaming, at the expense of acceptable audio quality for music, movies, and everything else you listen to on your PC. The Gaming Audio Series HS1A Gaming Headset is different. The same careful acoustic engineering that delivers amazing game performance also gives you the precision audio response your favorite media deserves.

Features

Features
