Description

Product Details:

Connection cable between motherboard SATA connector and power supply Molex to SATA power.

This cable is used to the motherboard with the various devices, eg Hard disks or CD-Rom drives to take a connection. Extra shielded and insulated, this cable is ideal for use on their PC! The current-signal, power supply, give here the energy via a 4pin molex connector from the device and, the current contractor, is supplied via a SATA connection with power.

Features

Sleeving:

This cable is not only useful but also very visually appealing. To the overarching network that wraps the actual cable is very tight and this is precisely the effect which the Profisleever: Complete reconstruction of the cable in order to emphasize the uniqueness of its system even better! Particular attention was paid to the combination of the cable jacket (the sleeve), the plug, and the shrink tubing, that they paint a consistent picture.

Sets:

Phobya's goal is to give amateur and professional case modders here a bit far to come forward. Sleeving is like a lot of work and costs a lot of time, so you can now convert to the cables of Phobya his entire system just as you would like, just by simply changing cables.
