Description

Product Details:

Connection cable between motherboard SATA connection and eSATA devices.

This cable is used to the motherboard with the various external devices, eg Hard disks or CD-Rom drives to take a connection. Extra shielded and insulated, this cable is ideal for use on their PC! The securing tabs of the connectors are a special holding system which locks onto their device and offers a firm grip on the connector. This connection can be made with a handle and resolve again and that by pushing on the tabs. The mounting bracket can be mounted as usual.

Features

Sleeving:

This cable is not only useful but also very visually appealing. To the overarching network that wraps the actual cable is very tight and this is precisely the effect which the Profisleeve: Complete reconstruction of the cable in order to emphasize the uniqueness of its system even better! Particular attention was paid to the combination of the cable jacket (the sleeve), the plug, and the shrink tubing, that they paint a consistent picture.

Sets:

Phobya's goal is to give amateur and professional case modders here a bit far to come forward. Sleeving is like a lot of work and costs a lot of time, so you can now convert to the cables of Phobya his entire system just as you would like, just by simply changing cables.
