Description

Fan filters keep clean not only the system but are also visually very appealing.

Phobya applies here, with updated techniques on an old problem, the dust! This is achieved with this filter class. Consisting of three parts, there is here to discover more interesting subtleties.

The first part, as the front cover shows himself in a classic, unverschnörkelten look without visible screw heads, the computer protects against rough parts that could be drawn. Another non-negligible protection aspect: it will protect fingers and hands in front of the rapidly rotating blades of the fan. The lid is removable via a click system and connected to the back.

The back is the counter piece to the cover of the connection between fan and filter received. The back, this is not only stylish but also practical, honeycomb pattern of the lid, the so-dust protection includes the firm in its midst. Here also the mounting screws are set to be completely obscured by the cover.

The middle part is the actual dust. Fine-meshed enough to hold the smallest particles, but coarse enough not to disturb the air flow significantly. The filter can be removed completely, and thus is easy to clean.
