Product Images

Short Description

Revised as per feedback from the community, the Flex Tank is back in the form of the Flex Tank V2. We've added more capacity, a stronger faceplate, and the ability to directly attach a D5/655 style pump to the back of the unit. This micro-res is designed to fit in small places where a cylinder or bay reservoir may not be an option. Should you not need to mount a pump directly to the unit, the reservoir comes with a cover plate to seal the pump cavity on the back of the unit.

Description

Revised as per feedback from the community, the Flex Tank is back in the form of the Flex Tank V2. We've added more capacity, a stronger faceplate, and the ability to directly attach a D5/655 style pump to the back of the unit. This micro-res is designed to fit in small places where a cylinder or bay reservoir may not be an option. Should you not need to mount a pump directly to the unit, the reservoir comes with a cover plate to seal the pump cavity on the back of the unit.

The reservoir is constructed from high quality acetal (POM) and a laser cut cast acrylic faceplate. The frosted model is made from a combination of CNC machined cast acrylic and laser cut cast acrylic.

Frosted model comes drilled with two 5mm ports to add your own LED's
