Short Description

Set of replacement screw/springs for use with Intel socket LGA 2011 motherboards.

Description

Set of replacement screw/springs for use with Intel socket LGA 2011 motherboards.

Compatibility:

Compatible under some technical restrictions with Apogee GTX, GTZ, and XT; fully compatible with Apogee HD.

Technical restrictions:

Issue: Due to close tolerance issues in the machining of the slots of the hold-down brackets, there may be random interference issues between the socket 2011 screws and the Apogee GTX, GTZ and XT hold-down brackets: in other words, in some cases the diameter of the hold-down bracket slots might be a little too small to allow the socket 2011 screws to fit in.

Resolution: End-users who are willing to modify their bracket may do so by using a hand-drill and a 5mm (13/64) drill bit to rim the slot ever so slightly. This will remove enough material from the slot to allow the socket 2011 screws to fit in freely.

Option: A fully compatible replacement hold-down bracket for Apogee GTX, GTZ, and XT will be offered for upgrade purposes shortly.

Additional Information

Brand	Swiftech
SKU	APOGEE-SOCKET-2011-KIT
Weight	0.3000
Color	Black
Block Accessory Type	Mount Screw
CPU Series	Intel 2011/2011-3/2066
Block CPU Type	Intel
