

# Fan Controller Sensor-Hub (Digital) for T-Balancer

\$32.99

## Product Images

## Short Description

The digital sensors expand the T-Balancer for another 6 digital sensors. Thus are a total of 8 digital readout points available. The sensors are digital and analog sensors have the advantage over a smaller deviation from the real temperature. The temperature variation is linear and can also be calibrated.

## Description

---

The digital sensors expand the T-Balancer for another 6 digital sensors. Thus are a total of 8 digital readout points available. The sensors are digital and analog sensors have the advantage over a smaller deviation from the real temperature. The temperature variation is linear and can also be calibrated.

### Features:

- Precise, digital, linear integrated band-gap temperature sensor (0 ° -125 °)
- All sensors are calibrated by software
- The wiring is simple via a bus, it will not be linked all the sensors centrally: No wires, but from sensor to sensor connected.
- Free mapping between sensors and fans possible, both multiple sensors to one fan (who is hottest) as well as more fans to a sensor

### Delivery:

6x digital temperature sensors (address 2 to 7), sensor cable extension cables, sensors, 1x mCubed superstrong thermally conductive adhesive pads

## Additional Information

---

Brand	Phobya
SKU	PH-70029
Weight	0.4000
Fan Accessory Type	Controller
